

VOIR BOUGIE® - SAFETY BOUGIE by Adroit Surgical™

The Only Bougie with Patented High-Visibility Depth Markers

The Voir Bougie® by Adroit Surgical is a high-performance airway management tool designed for medical professionals facing difficult intubations. With superior flexibility, durability, and high-visibility design, it enables precise tracheal placement for safer, faster airway access. **Ideal for use in hospitals, as well as military and civilian emergency settings**, the Voir Bougie® enhances speed, control, and confidence wherever critical care is needed.

Why Choose Voir Bougie?

- **Bright Safety Markers** - Instantly visible depth cues reduce over-insertion risk
- **Prevents Complications** - Helps avoid trauma like pneumothorax or esophageal intubation
- **Optimized for Field Conditions** - Easy to see in low-light, bloody, or soiled airways
- **Malleable Coude Tip** - Holds its shape for targeted, controlled intubation
- **Universal Compatibility** - Works with all laryngoscopes (video + direct)
- **Symmetrical Design** - Prevents orientation errors under pressure

Tactical Advantage

- Tactical version includes an extra 10 cm (total 70 cm) for added control
- Packaged coiled for quick deployment in pre-hospital and combat environments

Product Specs

- **Size:** 15 Fr (5 mm)
- **Length:** 70 cm
- **Available Styles:** Straight or Tactical (Coiled)
- **Compliance:** BAA & TAA Certified - Made in the USA

Catalog Number	UOM	Description	UPC
VB-2010	10/CS	Voir Bougie, Straight, Individual Pouch (15 Fr)	859290006219
VB-3010	10/CS	Tactical Bougie, Coiled, Individual Pouch (15 Fr)	859290006226

US vs THEM

Don't wait for a complication to make the switch!
Engineered to prevent what others can't

Vie Scope by Adroit Surgical™

The Vie Scope™ is a patented, self-contained, battery-powered, single-use laryngoscope designed specifically for pediatric patients (toddlers to age 10). It delivers unmatched visualization for airway management in emergent and routine settings — even in challenging conditions.

Why Choose Vie Scope?

- **Patented Full-Length LED Illumination** – Bright, unobstructed light through the entire tube and lumen for optimal visualization, even with blood or secretions present.
- **Open-Slot Blade Design** – Large right-side slot allows direct, 'sideways' ETT insertion under continuous vision.
- **Versatile Technique** – Functions like Macintosh or Miller blades — place in the vallecula or lift the epiglottis. Also serves as a bougie introducer.
- **Safe, Gentle, Easy-to-Use** – Rubber tooth guard protects teeth/gums during rotation for clear vocal cord exposure.
- **Single-Use & Disposable** – Reduces risk of cross-contamination and eliminates reprocessing time/costs.

Tactical Advantage

- **First-pass success focus** – increases intubation success rate, reducing risk and procedure time
- **Portable & self-contained** – battery-powered for use in any environment.
- **Intuitive training curve** – familiar technique for providers, no complex video equipment required.

Illuminate the airway – Elevate your success

Who Uses It

- EMS & Field Medics
- Emergency & Critical Care Teams
- Anesthesiologists & Airway Specialists
 - Trusted for adult airway management when seconds count — in the field, ED, OR, or ICU.
